

## ABSTRACT OF THE DISCLOSURE

A recording medium printed out by an image forming section is ejected to an ejection unit provided at an upper portion of an image forming apparatus. This ejection unit owns an inclination portion which is obliquely formed and has both a lower edge and an upper edge. At least a portion of a developer storage space is arranged in an area "A" which is surrounded by this inclination portion, a horizontal plane extended from the lower edge of the inclination portion, and also, a vertical plane extended from the upper edge of the inclination portion.
